

It's more than just a headache...

Concussions can affect both hearing and balance, which can significantly affect your daily life.

Approximately

20%

of adults and children with concussions experience persistent problems that interfere with their return to daily life or regular activity.

Hearing and balance difficulties can include:

- Trouble hearing conversations in quiet environments
- Difficulty following conversations in background noise
- Nausea
- Visual impairments
- Dizziness or vertigo
- Hyperacusis (increased sensitivity to everyday sounds)
- Misophonia (severe sensitivity to certain sounds).
- Tinnitus (ringing or buzzing in the ears)

Audiologists can help.
